Summary

This is a temporary title, please change it.

> TC: Another paper idea which isn't very original is in general the experience with moving to digital in the team, switch to slack as main driver, addition of daily meetings and issues with those, finally issues trying to move to a sort of kanban system: trello wasn't satisfactory, people have their own tools usually (own todo system, org mode or another) and keeping 5+ platform in sync is a terrible idea, as is forcing everyone to use the same platform.
